INSTALLATION DO'S AND DONT'S

Unpacking your DDP-700

When you unpack your DDP-700, make sure you keep all packing materials in a safe place, in case you later need to transport it to return it for servicing. In the box, you will find :

- DDP-700 handset
- 2 pieces of battery
- a belt clip
- the DDP-700 base unit
- AC adaptor
- User Manual
- a telephone line cable

Connection and condition for use

The DDP-700 is connected to the public network using the standard telephone plug and socket systems.

You can connect your DDP-700 to :

- a line connected directly to a local exchange, with its own directory number
- an extension socket connected to a local exchange
- an extension on an approved PABX

Choosing a site for the Base

The DDP-700 base unit should be installed where :

- the mains adaptor plug will reach the 220V AC main power supply
- the telephone cable will reach your telephone line socket
- it is not close to another telephone
- it is not close to a sink, shower or anywhere else where it might get wet
- it is not close to other electrical equipment (washing machines, microwave oven, TV, fluorescent lights, etc.)
- 1. Choose a suitable site for the DDP-700 base
- 2. Plug-in the mains power lead and the telephone line cord on the DDP-700 base back side
- 3. Plug the mains AC adaptor into the AC mains socket
- 4. Insert the telephone line plug into the telephone socket.

Radio signal between handset and base

To use your DDP-700 cordless telephone, you must be able to establish a radio link. It is therefore noted that :

- placing the base unit as high as practical will give a better result.
- placing the base unit near any large metal object, like refrigerator or filling cabinet may block the transmission of radio signal
- other solid structures, like walls may reduce the radio signal strength

USER GUIDE	MODEL NAME	PAGE
	DDP-700	5

INSTALLATION DO'S AND DONT'S

Electrical Safety

- 1. **DO NOT** install the base unit near a sink, bath or shower or anywhere else where it could get wet. Electrical equipment can cause serious injury if used while you are wet or standing on water.
- 2. If the base unit ever falls into water, **DO NOT** retrieve it until you have unplugged the AC mains power adaptor and the telephone line plug from the telephone wall socket.
- 3. DO NOT allow the handset to come in contact with water
- 4. DO NOT open the handset or the base.
- 5. **DO NOT** allow the charging contacts or the battery to come in contact with electrical conductive materials such as metals, rings, paper clip, key, etc.
- 6. MAKE SURE you insert the batteries in correct polarity.
- 7. **NEVER USE** your DDP-700 in the open air during a thunderstorm unplug the base unit from the telephone line and the AC mains socket where there are storms in your area. Damage caused by lighting may likely to happen.
- 8. If your DDP-700 is not to be used for long period of time, disconnect the main AC power adaptor from the AC power socket and the telephone line from the telephone wall socket

Emergency calls

Your DDP-700 need mains power. So you cannot use for placing a call during AC power failure.

Thus, a basic phone that does not need AC mains power is needed to place an emergency call during power failure.

Charging the batteries

Your DDP-700 handset need battery to operate. During the first use of your DDP-700, it is recommended that the handset is left over on charge overnight to ensure maximum in-use time.

- 1. Only use the rechargeable batteries supplied with your DDP-700
- 2. Install the rechargeable batteries into the rear of your handset. MAKE SURE you insert the batteries in correct polarity.
- 3. Position the battery cover over the rear of the handset and slide into place.
- 4. Place the handset on the base unit to charge.
- 5. The handset will beep and the red LED CHARGE light on the base unit.

NOTE : If the charge do not light up, reposition the handset in the base unit ensuring the charging points contact.

USER GUIDE	MODEL NAME	PAGE
	DDP-700	6

GETTING STARTED

Handset battery charge level

- 1. The Level of the battery power is indicated as a battery icon on the LCD display in the handset. If the battery icon shows empty, your DDP-700 need to be charge.
- 2. When in use and your DDP-700 emit battery low warning tone, your DDP-700 need to be charge
- 3. When fully charge your DDP-700 will operate for eight (8) hours talk time for earpiece, one hour for the speaker phone and 100 hours of standby time.

On / Off function

The button OK when press and hold will switch on or off the power of your DDP-700 handset. When your DDP-700 is set to off, your DDP-700 will conserved the battery power, however placing and receiving a call cannot be made.

Out of range warning

If you are moving around during a call and you hear an out of range warning tone from your DDP-700 handset, thi means you are going out of your DDP-700 base coverage. Move a little closer until the tone stops. If you do not move, your call may be cut off. If your call will cut off, you will hear beep tone and your DDP-700 handset antenna icon will continuously flashing.

Press , your DDP-700 handset will display BASE, flashing. You may need to go closer to the base to establish radio link between the handset and the base.

Standby mode

When the handset is not in use, the handset is in the **standby mode**. The LCD will display the handset name and number. The clock and date is also shown.

Note that, the clock and date should be set.

The clock (time and date)

Your DDP-700 handset can display the time and day. You should set it to the correct time and day at this time. For your first setting on your DDP-700 - digital cordless phone, follow the instruction below to set the time and day.

- up to select HANDSET menu. 1. Press 2. Press to select CLOCK. 3. Press 4. Press OK 5. to select SET CLOCK. Press 6. Press **OK** . The 2 digits hour number are blinking.
- 7. Press the hour on the numeric keypad, 05= 5 AM, 17=5 PM, 23=11 PM

USER GUIDE	MODEL NAME	PAGE
	DDP-700	7

GETTING STARTED

down to go to the minutes setting. The 2 digits minutes are blinking. Press 8. Press the minutes directly on the numeric keypad, 01=for 1 minute, 25=25 minutes. 9. 10. down to go to the month setting. The 2 digits Month number are blinking. Press 11. Press the month directly on the numeric keypad, 01=January, 05=May, 11=November. 12 down. The 2 digits Date are blinking. Press Press the date directly on the numeric keypad (example : 01, 02, 10, 20, 31) 13. 14 A confirmation tone is heard. Press three times to exit CLOCK setting or repeat 5 to 13 to set the clock once more. 15. Press (

CONGRATULATIONS!

You just made the first programming - setting the clock and date on your DDP-700- digital cordless phone.

Note : When your DCT101 encountered AC power failure, or when you removed the AC adaptor, the clock will be inaccurate. Upon power up, it will be automatically set the time to **00:01** and the date to **1-01**. You need to set the correct time and date when your base is power on. See Set the clock -autocalibration on page 26, this will automatically set the date and time base on the FSK CID of the PSTN network. This will only work if your PSTN connection can provide FSK CID and have the date and time information.

When your DDP-700 handset is out of battery power, just put the unit on the charge cradle on the base and the time and date will be restored. There is no need to set again the time and day.

If you register new DDP-700 handset, there is no need to set the clock on the new handset The Time and Date will synchronized to all handsets.

If you changed the Time and Date on one handset, the changes will take effect.

If you register another DECT GAP compatible to your DDP-700 base, the time and date may not be possible to display on the LCD of this new handset.

Making a call

To make a call by Pre-dialing external call

Placing an external call is similar to dialing a Mobile Phone, dial the number then press the "send" key. This is the most convenient way for placing a call, since if you press a wrong number, you can delete it by pressing the clear key.

- 1. Dial the number you wish to call. If you made a mistake, press **(**) to delete the number.
- 2. Press C to place the call. Your DDP-700 will seized the line and dial the number.

To end a telephone call

- 1. Press C at the end of your call.
- 2. Or, place your DDP-700 handset on the base unit cradle.

To make a call from phonebook

1. Press 📙

Note : If the LCD display EMPTY, store name and telephone number first, turn to page 14.

- Press = to search the name you want to call.
- 3. Press C. The person's telephone number will appear on the LCD. Your DDP-700 will seized the line and dial the telephone number.

To make a call from Caller ID list (call back)

- 1. Press 🚖 down. If it display *EMPTY*, you don't have missed CID calls.
- 2. Press 🚔 to search the name or number you want to call.
- 3. Press **C**. The telephone number will appear on the LCD. Your DDP-700 will seized the line and dial the telephone number.

USER GUIDE	MODEL NAME	PAGE
	DDP-700	9

To make a call to another handset (internal call)

When you have more than one handset registered to your DDP-700 base, you can call this handset - this is internal call or handset to handset call as distinct to external call (outside telephone call).

You should know the number of the other handset register to your DDP-700 to make an internal call.

- 1. Press **INT** followed by the handset number. Internal calling tone is heard.
- 2. The Intercom called user need to press *C* to received and end the Intercom call.
- **Note :** Your DDP-700 has a feature to distinct the ringing tone of an external call and internal call. Please see the detail on Handset ring melody for external call and internal call on page 18 and 19 respectively.

To make a call for Baby Sitter (Monitor)

When you have more than one handset registered to your DDP-700 base, you can set the other handset to monitor a specified place, generally it is used for baby sitter. First, you should set the other handset to operate in Babysit mode, the Icon should be display on the handset LCD indicating the handset is in Babysit mode. Please see programming under Baby Sitter on page 28.

You should know the number of the other handset in Babysit mode. Place this handset in the desired place to monitor.

- 1. Press (INT) followed by the handset number. You are calling the handset which set in Babysit Mode.
- 2. The other handset will take the call automatically. You can hear the surrounding sounds from your

DDP-700 on the earpiece, earphone or speakerphone mode.

3. Press C on your DDP-700 to end.

Last Number Redial

When LCR function is active (See page 38 and 44), use Outgoing Call Review / Redial to dial Last Number.

- 1. Press C followed by R/P
- 2. Your DDP-700 will dial the last number you used in making a call.

Outgoing Call Review / Redial

1. Press **R/P**. Press 😑 preview up to 10 numbers or names. If you dialed out from Phonebook, the

name will appear instead of the number.

Press C if you wish to dial the number.

USER GUIDE	MODEL NAME	PAGE
	DDP-700	10

To answer a call

Unless priority has been setup, your DDP-700 base and handset will ring at the same time, please see Personalized Your Setting under Ring Priority on page 21. See Page 12 if CID service is available in your telephone line.

Earpiece mode

1. When your DDP-700 ring, pres 🜈 if it is off the base charging. If it is on the charging cradle, picking up

your DDP-700 will go to TALK mode without pressing the C

Speakerphone mode / handsfree

1. When your DDP-700 ring, press 🥠 . You may place your DDP-700 handset on a table and speak

and listen freely within 1 meter away.

During a call

Volume level

1. Press 🔷 up to increase the volume or 🔷 down to decrease the volume while in the earphone mode or speakerphone mode.

Microphone mute

If you want to speak secrecy with any person in your side without sending it to the person on the phone.

- 1. Press 🙁 . You can now speak freely, the other person on the telephone line will not hear you.
- 2. Press 🙁 again to un-mute your DDP-700. Conversation is again possible.

Transferring an external call / External Call Hold

If your have more than one handset registered to your DDP-700 base, you can transfer the external call to this handset. You should know the number of the other handset register to your DDP-700 to transfer the call.

1. When you are engaged in external call, press **INT** followed by the handset number where you wish

to transfer the call. While calling the other handset, the external call is on HOLD. The called handset

need to press *C* to answer the internal call.

- 2. Once the other handset has been connected, press 🦰 on your handset to transfer the external call.
- 3. If the other handset is no answer or do not want to take the external call, press *m* to return to the external call.
- **Note :** The transferred call can be transfer back to the first handset who take the call, or to another handset (if there are more handsets) registered to your DDP-700.

USER GUIDE	MODEL NAME	PAGE
	DDP-700	11

Conference call

If your have more than one handset, you can have a three (3) conference call with another handset and an external call. You should know the number of the other handset register to your DDP-700.

1. When you are engaged in external call, press (INT) followed by the handset number where you wish

to have a conference call. Internal calling tone is heard, the external call is on HOLD.

- 2. The Intercom called user need to press C to answer the other handset call.
- 3. Once the other handset has been connected, press **INT #** on your handset to active conference

call. (The called handset by Intercom cannot initiated the conference call, only the handset who called

internal call can initiate the conference call).

4. If the called handset don't want to have conference or no answer, the calling handset need to press

INT to return back to the external call.

5. If one of the DDP-700 user wish to leave the conference call, prest

call. If during the 3 conference call, the external call leave, the internal handset to handset connection

retain and communication is still possible, however, the busy tone is heard. To end the handset internal

call, press 🥐 on each handset.

Call Shuttle

If your have more than two handsets registered to your DDP-700 base, one handset can have an external call, the two other handset can have internal call. You can also transfer the EXTERNAL call to other handset, then transfer the call again to another handset, shuttle backward and forward the EXTERNAL call.

Sending DTMF

You can use the keypad (0 to 9, * and #) to send tones during a call. For example, to operate an answering machine, or to key in option for an automated answering services or for home banking.

Headset mode

Your DDP-700 handset has a headset jack so that earphone can be used. Earphone is convenient to use in handsfree operation (if don't want to use speakerphone) while working or doing something where in you cannot accommodate to handle the handset.

- 1. Plug the 2.5mm male mobile phone headset jack located on the right top corner of your DDP-700
- 2. Wear the headset. Arranged the microphone so that it closely to your mouth. Placing and receiving a call is now possible using your headset.

USER GUIDE	MODEL NAME	PAGE
	DDP-700	12

Caller ID

Caller Identity Delivery (CID) is a feature of Telephone system and DDP-700 that will let you see who is calling on the line. DDP-700 CID feature will also let you know who calls you in your absence.

Call Screening

With CID service implemented on your telephone line, when your DDP-700 rings, the caller's number will display on your DDP-700 handset. (If your telephone system service can provide the caller name, your DDP-700 will display the caller's name instead of the number). You have the option to received the call or not. If you don't received the call, your DDP-700 will saved the caller's number or name. Your handset CID icon and Base In-use/New Call LED will flash indicating a missed call.

1. When your DDP-700 ring, calling number will appear in your handset display if CID service is available.

Press C to take the call.

2. Press C again to end the call or you may simply put your handset on the base charge cradle.

CID Phonebook Matching

With CID service implemented in your telephone, if the caller's number will match the telephone number you stored in your phonebook, it will display the name same as the name in the phonebook rather than the CID number or name. If this is a missed call, when you review the caller list, it will display the name same as in the phonebook and not the number or name.

CID Reserved and Unavailable

If CID service is available in your telephone network and your DDP-700 will display UNAVAIL or RESERVED when an external call comes in, this means that the caller information is not available (UNAVAIL) or withheld (RESERVED).

Autotalk

When CID service is implemented in your telephone line, your DDP-700 will bypass autotalk feature.

When your DDP-700 handset is on the base charging cradle and an external call comes in with CID information, your DDP-700 handset will not auto talk if you pick up the handset from the base cradle. Your DDP-700 will let you see who is calling (CID information : name or number) and let you decide if you wish to answer the call or not.

Press Call And your DDP-700 base base base of the call. If you do not answer, it will register as New Call /Missed call and your DDP-700 base

New call indicator and handset icon are flashing.

If your telephone line is not provided with CID service, when you pick up your DDP-700 from the base charging

cradle, your DDP-700 will undergo autotalk, thus, there is no need to press the C key.

USER GUIDE	MODEL NAME	PAGE
	DDP-700	13

Unanswered call review

During your absence or not able to attend to a call, your DDP-700 will remember the caller's number and time of call. Your DDP-700 base NEW CALL indicator and your handset CID icon will flashing indicating a missed calls. Your DDP-700 can saved 25 missed calls. If calls is more than 25, the old callers will be deleted to give space for new callers. To review caller's during your absence,

- 1. Press 📥 down. (If there is no CID, the LCD will display **EMPTY**).
- 2. If your telephone service provides the name and number of the caller, the name will be display first.
 - Press or The telephone number will display.
- 3. Press or the time of call will display.

example. 14h50 08-01 - means 2 PM, 50 minutes January 08

Press
 to exit Caller ID review or press
 to review.

Adding new handset

Another DDP-700 handset

Your DDP-700 Mini DECT cordless phone is a GAP compliant (Generic Access Profile) which can access and interwork with other GAP DECT. You can register up to five GAP DECT handsets to your DDP-700 base.

The handset number is displayed at the right side upper corner of the LCD of your handset. It is label as 1 to 5. Your original handset is the first to be registered to your base, so, it is labeled as HANDSET 1.

To register another DDP-700 handset to your base; you should know your DDP-700 system PIN code. This is a numerical digit code (maximum of 8 digits). It was preset to 0000. You can changed this PIN code if you like that your DDP-700 cordless phone system will not access by other person.

You cannot register another handset to your DDP-700 if you don not know the PIN code.

- 1. Press 😑 up to select **REGISTER** menu of the new handset to be register to your Ddp-700 base.
- 2. Press or Your DDP-700 LCD will display BS 1 2 3 4. One (1) is flashing indicate that this handset

has been register to base 1.

- 3. Press 2, to select that this handset will be register to another base #2 (other than the original base).
- 4. Enter the present PIN code of your DDP-700 system. (default code is 0000). Press or .

Your handset is now looking for Base # 2.

5. Press and Hold the Page key on Base # 2 where you intend to register this handset until it will emit 2

beeps. Release the page button. Your base is now in subscription mode.

6. The handset will subscribed to the base shortly, if not, put the handset closer to the base. After registra-

tion, your handset number will be HANDSET 2.

Another DECT GAP compliant handset

For registration of another DECT GAP compliant handset to your DDP-700 base, you should know the procedure for registration of this handset and the PIN code of your DP-700 base. Refer to the user manual.

For setting your DDP-700 base to subscription mode, press and hold your base page key until two beep emit and then release. Your base is now in subscription mode.

Note :

Due to DDDP-700 have clock features (time and date stamp on the LCD), some GAP DECT Phone can work well with DDP-700 base, however, if this Handset don't have clock and date stamp on the LCD, it may result to auto-paging this handset.

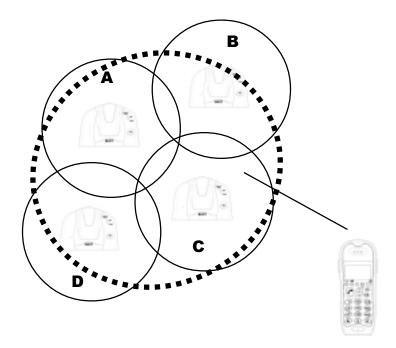

USER GUIDE	MODEL NAME	PAGE
	DDP-700	30

Pico cellular system

Your DDP-700 MINI DECT cordless phone can be configure as a pico-cellular system by adding more base placed in different locations. This will extend your handset mobility. This application can be implemented in the office or factory. If you configure your DECT system to operate in pico-cellular, you should see to it that the placement of base unit will be optimized to cover the entire location where you intend to use your DDP-700 handset.

The following should be observed :

- 1. Register another base/s (another DDP-700 base or another DECT GAP compatible) to your DDP-700 hand set.
- 2. Place these base in the location where you intend to operate your handset, place them to cover all area without dead spot, this means that each base station is within the range of each other base. Please see figure below :

3. Your DDP-700 however cannot establish a seamless handover (handover means the transfer of call-connec tion from the range of location A to location B, please see figure above). The handover from location A to be takes about 2 seconds or more. Thus, when you are on call progress on location D and moving to location C, your DDP-700 will warn you (if *out of range warning* is set to on-see warning tone) of out of range from location D. If you move closer to location C, your DDP-700 handset will lost connection and call will be cut off. If you move further to location C, your DDP-700 handset will be connected to the base located at C.

USER GUIDE	MODEL NAME	PAGE

Dialing LCR

There is no difference in dialing a normal telephone number and routing telephone number. LCR routing number can be directly dialed using the key pad (pre-dialing), Phonebook or CID or redial. Please refer to page 8 and of this User Guide for the different ways of dialing a number.

It is recommended when using LCR function to use Pre-dialing as described on Page 8- To make a call by Predialing external call. When re-dialing is required, it is recommended to use Outgoing Call review / Redial as stated on page 9.

USER GUIDE	MODEL NAME	PAGE
	DDP-700	49

Call Barring

Choose this features if you would like to restrict your DDP-700 to use for calling.

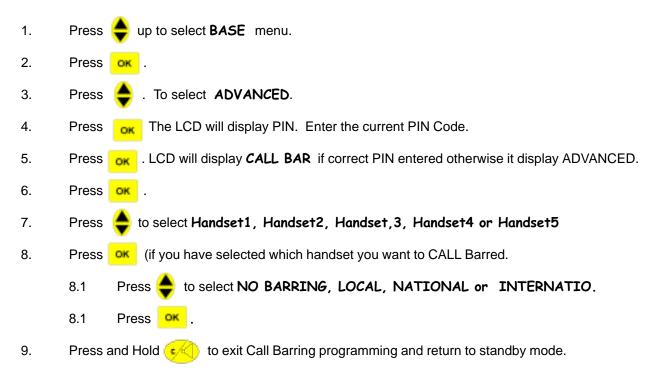

There are three ways you can restrict your DDP-700 for calling numbers:

- a) Local
- b) National
- c) International

When you restrict your DDP-700 for local call, any number you diaL will be barred. If you restrict your DDP-700 to National, any telephone number starting with "0" and or "00", your DDP-700 will not dial. If you restrict your DDP-700 to INTERNATIONAL, any telephone number starting with "00", your DDP-700 will not dial.

If you have more than one handset (multiple handset use), you can select to restrict each handsets.

When your DDP-700 is connected to PABX, If Call Barring is active, it will barred only telephone number after the PABX code. Internal PABX call is not affected.

Use Call Barring Feature :

When Call Barring is active, if you dial a telephone number that is barred, the Base will turn off and will not dial the number. Your DDP-700 handset will emit a tone, indicating unsuccessful dial.

Press *C* or put back your DDP-700 to base to return to standby mode.

When you turn off the Call Barring function, all 3 levesl of barring will be turn off. You need to set each level of call barring again.

USE IN BUSINESS

USE IN BUSINESS?

Your DDP-700 can be plugged into an extension socket on most PABX. It cannot, however, be guaranteed that it will work satisfactory with all type of PABXs, if you have problems, please consult the authorized maintainer of your PABX. Before attempting to use your DDP-700 in your PABX, please refer to the features described in your PABX User Manual.

Dialing type

Your DDP-700 is set to tone dialing. These settings are correct for nearly all PBXs. However, if you find that you cannot make calls or use PABX features with your DDP-700, the setting may need to be changed. Consult the documents supplied with your PABX.

Do you need a PAUSE ?

Your PABX Manual may tell you that, after dialing the outside PABX access code (usually 9), you should wait for another second Dial Tone before dialing the external call- telephone number. Some PABX do not require you to wait. If you do NOT need to wait for dial tone, you will not need press the PAUSE button **RP** to insert Pause during dialing or when storing number in memory. If you need to wait for the second dial tone, you can use the **RP** where indicated.

There are two ways you can set the pause if your PABX require it.

- 1. Using the **RP** key to insert in dialing number.
 - ex. Dialing 008522678 in your PABX with an access code of 9 would be : 9 RP 008522678. Your DDP-700 will insert a 3 sec pause after the PABX access code "9" then dial the outside number.

2. You can use of DDP-700 full feature PABX Pause and PBX access code. Please refer to page 35. It is better to makes use of the DDP-700 PABX feature. In this way, you can makes use of the Outgoing Call Redial function. Dialing an external call would be much easier. If you dial the same number as above example, you simply dial 9008522678 and your DDP-700 will automatically insert the Pause after the PABX access code.

PABX Access Code and PAUSE ?

Your DDP-700 has programmable PAUSE. You can set the PAUSE duration in PABX Menu on page 35, under Base, PABX-Pause. Please Refer to your PABX User Manual.

Your DDP-700 has programmable PABX Access Code (usually 9). You must programmed the PABX access code in your DDP-700 to makes use of its full PABX feature. Please refer on page 35.

Do you need Recall (Flash)?

Your DDP-700 Recall time is 100msec. Consult your PABX user manual if you can use it. Predial function (page 8) , Redial (page 9) and full PABX feature (page 36) of your DDP-700 will make easier to use DDP-700 when connected to PABX. At standby mode, dial the telephone number, you should place your PABX access code (usually 9). If you make a mistake you can edit easily. If the line is busy, turn off your phone and call again after some minute, and make use the redial function to dial the same number.

PABX Storing number in the Phonebook

For external call, always put the PABX access code before the telephone number, follow the procedure on page 14. For PABX internal call, there is no need to put the PABX access code.

TECHNICAL DETAILS

Standard	Digital Enhanced Cordless Telecommunications (DECT)
Frequency	1.88 to 1.9 GHz
Channel Bandwidth	1.728 MHz
Modulation	GFSK
Data Rate	1.152 Mbps (Baud rate)
Duplexing	Time Division Duplex (TDD)
RF Accessing	Time Division Multiple Access (TDMA)
Channel	120 TDMA channel
Speech Encoding	Adaptive Differential Pulse Code Modulation (ADPCM) at 32 Kbps
Speech Security	Digital Security
Communications Range	about 300 meters in open space (no block) about 50 meters in building
Power Supply Handset	Ni-Mh battery : 2.4 Vdc, 550mAm (2 x 1.2 AAA)
Base	Input : 230 Vac / 50Hz Output : 9.0 Vac / 200mA 6.5 Vdc / 300mA
Operating Time Standby	100 hours
Talking Time	8 hours (headset / earphone mode) 1 hour (speakerphone mode)
Operating Temperature	0 °C to 40 °C
Storage Temperature	-20 °C to 60 °C
